

The World Bank's [World Development Report 2014: risk and opportunity – managing risk for development](#) - argues that poor risk management reduces the chances of ending poverty and boosting shared prosperity, and demonstrates that an ability to manage risk can significantly contribute to development by saving lives, averting economic losses, creating opportunities, and helping people build better, more secure futures. The Overseas Development Institute held the UK launch of the report and you can watch the video and download the World Bank's presentation [here](#) .
